Arachnoiditis ossificans (AO) is a rare disorder that represents the end-stage progression of adhesive arachnoiditis. In contrast to the benign, age-related calcification of the meninges, ossification of the arachnoid leads to a clinical presentation consistent with spinal stenosis and may be associated with low back pain and lower extremity weakness (1). Given the symptomatology, magnetic resonance imaging (MRI) is frequently the first imaging modality performed; however, non-contrast-enhanced computed tomography (CT) offers the advantage of differentiating benign meningeal calcifications from frank meningeal ossification. These CT findings of a 56-year-old male, with a history of cervico-thoracic fusion, who presented with progressively worsening lumbar spine and bilateral leg pain over the past several years, demonstrate significant arachnoid ossification and canal stenosis (Figure 1). Although the underlying pathophysiology of AO remains to be elucidated, association has been indicated with an inciting event, such as prior spine surgery, intrathecal drug deposition, infection, and trauma, that leads to inflammatory changes in the arachnoid (2-5). MRI is an important modality used in the diagnosis of arachnoiditis; however, non-uniform enhancement of meningeal calcifications may lead to misdiagnosis. CT offers greater sensitivity than MRI for assessing the extent of ossification and for accordingly planning decompression or resection of isolated ossified plaques.

Informed Consent: Written informed consent was obtained from the patient who participated in this study.

Peer-review: Externally peer-reviewed.

Author Contributions: Concept – I.U., G.C., O.V.; Design – G.C.; Supervision – O.V.; Resources – G.C.; Materials – G.C.; Data Collection and/or Processing – G.C.; Analysis and/or Interpretation – I.U.; Literature Search – I.U.; Writing Manuscript – I.U.; Critical Review – I.U., G.C., O.V.

Conflict of Interest: The authors have no conflicts of interest to declare.

Financial Disclosure: The authors declared that this study has received no financial support.
